Brought to you by the Southwest Ohio Trauma Informed Care Collaborative

Grit. Fortitude. Determination. Resilience. No matter what you call it, teachers and administrators nationwide agree that there has never been a greater need to teach our youth how to thrive in school and in life. Studies have shown that students who score higher on resilience measures have improved social skills, higher grades, a greater love of learning, and better decision-making skills. This lively and interactive training brings to life resilience from neuroscience to intervention. Setting power struggles aside, we will explore how the brain heals itself and identify everyday, brain-based tools to help students of all ages and ability levels develop the desire to try and the resilience to keep moving forward. We will look at what you already are doing and share even more tools for turning adversity into action for all of us.
